

CSS Display Property

BEFORE vs AFTER — visual box comparison

1. display: block

Items become block-level: each starts on a new line and normally takes the available width.

BEFORE / NORMAL

AFTER / DISPLAY APPLIED

2. display: inline

Items can sit on the same line and only occupy the space their content needs.

BEFORE / NORMAL

AFTER / DISPLAY APPLIED

3. display: inline-block

Items stay on the same line, but you can control their width and height.

BEFORE / NORMAL

AFTER / DISPLAY APPLIED

4. display: none

The element is removed from the layout completely and takes no space.

BEFORE / NORMAL

AFTER / DISPLAY APPLIED

5. display: flex

The parent becomes a flex container and arranges its children along a flexible axis.

BEFORE / NORMAL

AFTER / DISPLAY APPLIED

6. display: grid

The parent becomes a grid container and arranges its children into rows and columns.

BEFORE / NORMAL

AFTER / DISPLAY APPLIED
